

The new TPU-closure

The new closure is sewn twice on both sides.

3 narrow slots connect both ends and form a stable closure.

The TPU-closure is on both long sides additionally fixed with a stainless-steel clip.

- easiest handling
- over-/or underlapping not required
- securing with special retaining brackets
- enormous flexibility
- also suitable for small roll diameters
- significant time savings during assembly
- high chemical resistance e.g. compared to cooling lubricants
- low material build-up
- additional assembly tools not needed
- pintle wire not necessary
- further sealing not required
